

Behind us is the first specialized training under the ongoing project "Strength is in us", fully financed from Norwegian funds. It was attended by 16 representatives of services and institutions working for the elderly and disabled in our city.

During the 3 days of training, the participants enriched their workshop with tools to help identify the problem of violence against the elderly and disabled. They also gained the necessary knowledge in the area of contacting a person affected by or at risk of violence, understanding the needs of such people, and methods of intervention, regulations and procedures in the case of experiencing violence by dependents.

It is hoped that the knowledge and skills gained will help to better and more effectively respond to any symptoms of abuse of vulnerable groups - the elderly and disabled.
